contact@danielrs.me - Houston, TX 77441

Systems Engineer with **8+ years** of experience specializing in high-availability distributed systems, developer platforms, and CI/CD automation. Proven track record of scaling infrastructure (10x throughput) and reducing operational overhead.

Education

- **University of Houston**. Houston, TX. United States.
  B.S. Computer Science. 2019-2021.
  Summa cum laude.
- **Houston Community College**. Houston, TX. United States.
  A.S. Computer Science. 2016-2018.
  Honors graduate.

Experience

- **Cloudflare, Inc**. Austin, TX. United States.
  Systems Engineer. 2021-2026.
  - Drove the design, implementation, and maintenance of new Workers features and their API; seamlessly introducing them with **zero downtime to thousands of customers**. These features include version history, gradual rollouts (split traffic across app versions), and custom domains (expose Workers as an origin).
  - Rearchitected an internal content distribution service, achieving a **10x throughput increase** and eliminating weekly production incidents, while reducing API latency by ~5 seconds.
  - Collaborated with other senior engineers in the analysis, redesign, and implementation of some of our hottest paths in the Workers API to increase speed, scalability, and availability. These efforts include but are not limited to database optimizations such as isolation levels, using read/write replicas, and query re-writes; also better concurrency control at the application-level to reduce race conditions and resource contention.
  - Spearheaded the technical design and oversaw the migration of CI/CD pipelines for all core Workers services from TeamCity to GitLab CI; reduced build times by **75% (from 50 to 10 minutes)**.
  - Standardized architectural patterns across the Workers codebase, improving developer velocity, testability, and maintainability for **100k+** lines of code.
- **ClearBlade, Inc**. Austin, TX. United States.
  Software Engineer in Test (Internship). 2020-2021.
  - Designed, implemented, and maintained a testing toolset for functional and end-to-end tests of ClearBlade systems, enabling internal ClearBlade developers to expressively write tests in a matter of minutes. The toolset itself integrates with the Golang standard library testing module.
  - Implemented an automated Jenkins CI/CD pipeline for deploying new, version-controlled ClearBlade environments, replacing the manual process that developers had to go through previously.
- **DeepCast, LLC**. Houston TX. United States.
  Software Engineer. 2018 - 2020.
  - Enabled DeepCast to scale to big-data analytics by implementing a distributed, tabular data-structure for transactional and analytical processes using Cassandra for available and tolerant data-layer.
  - Created a proof-of-concept platform for agile data-science development, running on Kubernetes and based on Pachyderm. The platform allowed data-scientists to easily plug their AI models into existing workflows.

Skills and competencies

- **Systems and Languages:** Golang, Python, Rust, Lua, SQL, Bash.
- **Cloud and Infrastructure:** Docker, Kubernetes, Terraform.
- **DevOps and CI/CD:** GitLab CI, TeamCity, Jenkins, Ansible.
- **Frontend:** React, Svelte, JavaScript, HTML5, CSS.
